

EMISSIONS (g/Kg)

\*As this brochure goes to press, the passing grade will most likely be 7.3 grams/kilogram but this may change.

RUMFORD

CONVENTIONAL

RUMFORD

CONVENTIONAL

A Rumford firebox will maximize the radiant energy of the fire due to its shallow depth and optimally angled sides.

A conventional firebox allows a fraction of the radiant heat out because of the depth of the firebox and the minimal angle of the walls.
