

# Sunglo® Patio Heater

## MODEL A270

### Gas-fired Infrared Patio Heater

#### Propane Gas

**FOR OUTDOOR PORTABLE USE ONLY**  
Not for use in residential dwellings

### DANGER

If you smell gas:

1. Shut off gas to the appliance.
2. Extinguish any open flame.
3. If the odor continues, keep away from the appliance and immediately call your gas company.

### DANGER

**DO NOT** store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Propane Gas cylinders not connected for use shall not be stored in the vicinity of this or any other appliance.

### WARNING

Improper installation, adjustment, alteration, service or maintenance can cause property damage, injury or death. Read the installation, operating and maintenance instructions thoroughly. before installing or servicing this heater.

### WARNING: CA Prop 65

If not installed, operated and maintained in accordance with the manufacturer's instructions, this product can expose you to substances in the fuel or from combustion including carbon monoxide, resulting in death or serious illness and which are known to the State of California to cause cancer, birth defects or reproductive harm. For more information go to [www.P65WARNINGS.CA.GOV](http://www.P65WARNINGS.CA.GOV)

**TO THE INSTALLER:** Leave this manual with the owner after installation.

**TO THE OWNER:** Keep this manual in a safe place in order to provide your service technician with necessary information for future reference.

### Please Note the following:

It is the sole responsibility of the purchaser to check for and comply with any local or national standards or restrictions as they pertain to the installation of outdoor heaters before purchase.

#### High Altitude

Installation of this appliance at altitudes above 2,000 (610 m) shall be in accordance with local codes, or in the absence of local codes, ANSI Z224.1/NFPA 54 or CSA B149.1.

# Installation, Operation and Maintenance Instructions for the Sunglo® Model A270 Gas-fired Patio Heater

## INSTALLATION

### Important Safety Rules

1. Children and adults should be alert to high surface temperatures of areas above the post when operating this heater.
2. Children should be carefully supervised when they are in the area of the heater.
3. **NEVER** hang anything including clothes and other flammable items on the heater.
4. **DO NOT** operate this heater unless it is fully assembled with reflector in place.
5. Installation and repair should be done by a qualified service technician. The heater should be inspected before use and at least annually by a qualified service technician. More frequent cleaning may be required as necessary. It is imperative that the control compartment, burner and circulating air passages of the heater be kept clean.

Prior to assembling your Model A270 propane heater, the following must be reviewed. Compliance with the following should yield satisfactory heater operation. These instructions should be retained for future reference. The installation must conform with local codes or local authority having jurisdictions.

1. The Model A270 gas-fired infrared patio heater is intended for heating residential and non-residential outdoor areas. When the appliance is connected to a fixed piping system, the installation must conform with local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.2/NFPA 54, Natural Gas and Propane Installation Code, CSA B149.1 or Propane Storage and Handling Code, B149.2.
2. This Appliance shall be used only in a well-ventilated space and shall not be used in a building, garage or any other enclosed area. This appliance may be installed in a shelter no more inclusive than:
  - a. With walls on all sides but no overhead cover.
  - b. Within a partial enclosure which includes an overhead cover but no more than two side walls. These side walls may be parallel, as in a breezeway, or at right angles to each other.
  - c. Within a partial enclosure which includes an overhead cover and three side walls as long as 30% of the horizontal periphery is permanently open.

3. Proper clearance from combustible materials must be maintained at all times. The minimum clearances are as follows:

### Minimum Clearance from Combustibles

Side	24" (61 cm)
Rear	24" (61 cm)
Ceiling	18" (46 cm)
Below	84" (214 cm)

Combustible materials are considered to be wood, compressed paper, plant fibers, plastic, Plexiglas or other materials capable of being ignited and burned. Such materials shall be considered combustible even though flame-proofed, fire-retardant treated or plastered. Additional clearance may be required for glass, painted surfaces and other materials which may be damaged by radiant or convection heat.

4. Heaters must be placed on a level area with adequate footing and be readily accessible. The heater may be permanently attached to the floor utilizing the Floor Clamp Kit (Part No. 27020) available from the manufacturer.
5. The gas manifold supply pressure must be regulated at 11" water column utilizing a U/L listed regulator. Any replacement regulator must be U/L listed. The minimum inlet pressure to the regulator from the tank is 5 PSI and maximum pressure is 150 PSI.
6. The heater must be inspected before each use, and at least annually by a qualified service person.
  - a. The appliance area must be kept clear and free of combustible materials, gasoline and other flammable vapors and liquids.
  - b. Gas jets and burner must be kept clear of dirt and cobwebs. Flow of combustion and ventilation air through the perforated portions of the heater must not be obstructed.
  - c. All gas connections should be checked for leaks using a soap solution. Never use a flame for this purpose.
  - d. The flame pattern at the emitter grid should be visually checked whenever heater is operated (see figure 1.). If flames extend more than ½ inch beyond surface of the emitter grid or black soot is accumulating on the emitter grid or reflector, the heater should be turned off immediately. The heater should not be operated again until repairs are made.
  - e. Any cleaning agent used on the heater should be of a non-combustible and non-corrosive nature.

**Figure 1. Normal Flame Position**

- f. The stainless-steel emitter grid normally does not require cleaning and should **NEVER** be painted. The reflector may be cleaned, but never painted.
7. The hose assembly shall be properly located out of pathways where people may trip over it. The hose must be protected from contact with hot or sharp surfaces both during use and while in storage. The hose assembly shall be visually inspected prior to each use of the heater. If excessive abrasion or wear is evident, or the hose is cut, it must be replaced prior to operating the heater. The replacement hose regulator, Part #90017-4, may be obtained from manufacturer or sales representative. See parts list.
8. **DO NOT** use any pressure regulator or hose assembly other than those supplied with the appliance. Replacement pressure regulator and hose assembly must be those specified by the manufacturer. Replacement parts may be obtained from the manufacturer or your local sales representative.
9. This appliance is designed to operate with a standard five (5) gallon propane tank. The propane cylinder must be:
  - a. Be constructed and marked in accordance with the specifications for propane gas cylinders of the U.S Department of Transportation (DOT); or the Standard for Cylinders, Spheres and Tubes for Transportation of Dangerous Goods, CAN/CSA-B339, as applicable;
  - b. Provided with a listed overfilling device; and,
  - c. Provided with a cylinder connection device compatible with the connection for the appliance.
10. Propane tank must be secured to the heater with protective chain provided. The cylinder must be positioned upright for proper vapor withdrawal. The cylinder must include a collar to protect cylinder valve.

The following precautions regarding the propane tank must be observed:

- a. Do not store a spare propane gas cylinder under or near this appliance.
- b. Never fill the cylinder beyond 80% full.
11. Tank connector fittings must be maintained in good condition. A leak test should be performed with soapy water whenever a new tank connection is made. **NEVER use a match to test for leaks.**
12. Propane tank must be turned off whenever the heater is not in use. When the heater is to be stored indoors, the connection between the propane cylinder and the heater must be disconnected and stored in accordance with Chapter 5 of the Standard for Storage and Handling of Liquefied Gases, ANSI/NFPA 58.
13. The A270 Sunglo Heater has been designed with several safety features. These include 100% safety shutoff control, elevated heating element, weighted base, and tank quick connect coupling. Any modification to the heater not described in the installation instructions may compromise the safety of this appliance. Of special concern is the following:
  - (1) DO NOT shorten post length;
  - (2) DO NOT bypass thermocouple safety;
  - (3) DO NOT operate heater without a reflector; and
  - (4) DO NOT remove filler from weighted base.
 Clothing or other flammable materials should not be hung from the heater, or placed on or near the heater. The area above the post may be extremely hot. Direct contact with these metal surfaces should be avoided in order to prevent burns or clothing ignition.

Outdoor Patio Heater

## HEATER HEAD ASSEMBLY Replacement Parts List

Item	Part No.	Description
1	70017	Nut, 1/4-20 Hex SST
2	70024	Washer, 1/4 SAE SST
3	10261	Reflector, PH
4	70006	Bolt, 1/4 x 3/4 Hex
5	70033	Washer, 1/4 Inter SST
6	27006	Assy, PH Emitter Grid
7	70065	Wingnut, 1/4 - 20 SST
8	30225	Shield PH Head
9	30202	Pan, PH Head
10	70072	Screw, #8 x 1/2 PP 'F' SST
11	30204-1	Cylinder, PH Perf
12	27007	Assy, PH Burner
13	70030	Clamp, 1"
14	35001-49	Orifice, #49 DS (Propane)
15	35012	Adapter, Orifice 3/8
16	90004-3	Control, 7000 MLC Propane
17	80005	Nipple, 1/2 x 2-1/8 Blk
20	27018-1	Assy, PH Head Base
21	90031	Thermocouple, T-46 18 IN
22	80031	Tubing, AL-1/4 x 14L
23	90022	Pilot, Propane #27920
24	90016	Propane Pilot Orifice
26	27025	Assy, 7000 Handle
27	30213	Channel, PH Pilot
28	70020	Screw, #10 x 1-1/4 SST
29	30299	Cover, PH Pilot Hole
30	80026	Tubing Fastener, 1/4"

## HEATER ASSEMBLY MODEL A270

### Step 1.

- Remove Pipe Assembly from Post Package and thread pipe onto heater base. Use 2 wrenches at least 12" long to tighten pipe to heater base. If Teflon tape is not provided gas pipe sealant should be used at this joint.
- Slide Pipe Assembly with header attached into the top of the post and secure heater to post with the four screws provided.

NOTE Post label should face front.

WARNING: Remove any dust cap or paper covering which may block the flow of gas

### Step 2.

- Secure "L" brackets to heater base with hex head bolts, spacers nuts, and lock washers provided.
- Secure socket assembly to "L" brackets as shown below using the hex head bolts, lock washers, and acorn nuts provided.
- Install chain kit onto "L" brackets using holes provided.
- Slide Decorative cover down over post socket.

### Step 3.

- Slide post down into socket with pipe extending through hole in the bottom of the socket.
- Slide Decorative cover up around post.
- Attached the hose to pipe assembly with quick connect adapter.
- Secure reflector to top of heater head. Use flat washers above and below reflector holes.
- Set tank into place and secure with safety chain.
- Connect regulator to tank.

Propane Portable Patio Heater

## Base Parts List

Item	Part No.	Description
1	60008-1	Lighting Instructions
2	30280	Post, A270 – 45" L
3	80006-4	Pipe, 42" L Black
4	70011	Nut, 3/8 Acorn
5	70013	Washer, 3/8 Lock
6	70007	Bolt, 3/8 x 3/4 Hex
7	70028	Eyebolt, 3/8 w/ Nut
8	70012	Bolt 3/8-16 x 1-1/4
9	70059	Nut, 3/8"
10	10264-4	Assy, A270 Base
11	30279-5	Univ "L" Bracket (24)
12	70029	Hook, 1-1/2" S
13	70027	A270 Chain
14	27033	Assy, A270 Dec Cover
15	90017-4	Assy, Reg/Hose QCC1
16	27002-4	Assy, A270 Socket
17	80085	Reducer, 1/2" x 1/4"
18	90078	Adapter, #250
19	27020	Floor Clamp Kit

### Portable Propane Patio Heater

## DSI – Spark Ignition System

Item	Part No.	Description
1	90065-3	Electrode with lead
2	70037	Screw, #8-32 x 3/8
3	70038	Nut, #8-32
4	30623-3	Igniter Cover
5	70072	Screw, #8-32 x 1/2 SST
6	60623	Bracket, A270 Igniter
*7	30629	Plate, Igniter Ground
8	90072	Battery, AA 1.5 Volts
9	90071	Igniter, BP-E1
*10	70066	Screw #10-24 x .25
11	30204-5	Cylinder, PH Perf

# Propane Safety

## **⚠ WARNING**

1. Only qualified persons are permitted to fill propane cylinder.
2. Never attempt to repair a propane cylinder.
3. DO NOT allow children to play or tamper with propane cylinders.
4. When transporting, keep cylinder secured in an upright position with the cylinder valve turned off.
5. Store cylinders outdoors in a well ventilated and secure area.

Propane Gas is heavier than air fuel that requires basic safety precautions. Take the time to read the safety precautions in this manual and on the propane tank. Consult your propane supplier in regards to safety handling and transport of your propane tank.

The A270 heater comes equipped with a hose and regulator for connection to a standard 20 lb. propane cylinder. All fittings necessary to attach the hose/regulator to the heater are included. The propane tank is not included. Operating pressure is 11.0" W.C.

### Propane Tank Requirements

A dented or rusty propane tank may be hazardous and should be checked by your propane gas supplier. Never use a cylinder with a damaged valve. Always check for leaks after every propane tank change.

The propane gas cylinder must be constructed and marked in accordance with the specifications for propane gas cylinders of the U.S. Department of Transportation (DOT) and designed for use with a Type 1 system only. DO NOT change the regulator/hose assembly from that supplied with the unit or attempt to use other types of tank connections.

### Propane Tank Connections

Connect the Regulator to the tank (with the tank valve fully closed). Although the flow of gas is stopped when the Type 1 system is disconnected, you should always turn the propane tank main valve off after each use and during transport of the tank or heater. Insert the regulator inlet into the tank valve and turn the black coupler clockwise until the coupler is tight. **Do not over-tighten the coupler.**

To disconnect the coupler, first, make sure the main tank valve is turned off. Grasp the coupler and turn counter clockwise and the inlet will then disengage.

### Test for Leaks

Leak tests must be performed with soapy water each time the tank is re-connected to the heater. Once the propane tank is connected open the tank valve. Apply soapy water with a spray bottle or small paint brush around tank valve and hose connections. If bubbles appear, repair of the heater or tank is required before the heater is operated.

Cylinders must be stored outdoors in a well-ventilated area out of the reach of children. If the appliance is stored indoors, the propane cylinder must be removed from the appliance and stored outdoors. DO NOT store a spare propane cylinder under or near this appliance. NEVER fill the cylinder beyond 80 percent full. For appliances designed to use a CGA No. 791 Connection. "Place the dust cap on the cylinder valve outlet whenever the cylinder is not in use. Only install the type of dust cap on the cylinder valve that is provided with the cylinder valve. Other types of caps or plugs may result in leakage of propane.

## TEST FIRING HEATER

Test fire heater, following the lighting instructions on heater post. Leak test all gas connections with soapy water. Soap bubbles indicate gas leakage. Do **NOT** use a match to test for gas leaks.

WARNING: White smoke may appear around the emitter grid during the first minute of the initial firing.

## TROUBLE SHOOTING

Problem	Possible Causes
Pilot won't light	<ul style="list-style-type: none"><li>• Air in gas line</li><li>• Low gas pressure</li><li>• Gas line turned "Off" at the propane tank</li><li>• Propane gas tank is empty</li></ul>
Pilot won't stay lit	<ul style="list-style-type: none"><li>• Bad thermocouple</li><li>• Corrosion of thermocouple contact</li><li>• Bad Valve</li><li>• Wind exceeding 10 mph</li></ul>
Main burner won't light	<ul style="list-style-type: none"><li>• Low gas pressure</li><li>• Blockage in orifice</li><li>• Manual valve not in "On" position</li></ul>

## Limited Warranty and Service

Heaters carry a 90-day commercial or one-year residential factory warranty. All heaters are stamped with the date of manufacture. In most cases, your dealer or sales representative will handle the warranty procedure for you. If there is no sales representative available, the heater head and regulator may be returned to the factory for repair. Warranty is limited to repair of heater at the factory or replacement parts. Any work or repair of this heater must be performed by qualified service personnel. Infrared Dynamics, Inc. will not be liable for any other expense to the customer, except as stated above.

### To Light Pilot

Rotate control knob to "Pilot" position. Firmly depress knob for 30 seconds while lighting pilot through ½" dia. lighting hole above control. Pilot should remain lit.

NOTE: Allow 1½ minutes to purge air through pilot after connection with a new tank of propane gas.

### To Turn Heater On

Turn control knob to "On" position.

### To Turn Heater and Pilot "Off"

Turn knob to "Pilot" position. Depress slightly and turn to "Off" position. Wait 5 minutes after complete shutoff of heater before relighting pilot. Turn "Off" gas tank when heater is not in use.
